OCEAN TTP LTD.

Class Y - CHF

STRATEGY

200% Ocean TTP

Class Y applies the Ocean TTP program at 200% notional exposure. Signals, markets and risk framework are identical to Class Alpha; position sizes are doubled, and returns and drawdowns scale with them.

As the leveraged expression of the strategy, Class Y suits investors who accept amplified drawdowns in exchange for amplified participation in the program's returns, and who size the position accordingly. Leverage changes the scale of the return path, not its character: correlation to traditional assets remains low.

INVESTMENT STRATEGY - OCEAN TTP

Absolute returns from systematic commodity futures, with low correlation to traditional assets.

Ocean TTP (Take The Points) is a proprietary program developed over two decades. It trades commodity futures systematically, drawing on technical data for insight into commercial supply and demand.

Strict risk control and broad diversification across 30 commodity markets underpin both the return profile and the low correlation to equities and bonds shown in the matrix above.
